Sprint Description:

This sprint focuses on implementing the suggestions from the previous sprint.

Sprint Retrospective:

- What went well?
  - The team was cooperative and tasks were completed before the deadline.
  - The transactions page was refactored on how it displays data.
    - The transaction has a sort feature using categories and frequency.
    - Pagination was also implemented.
  - The account information of the user was now reflecting on the account settings page.
  - Endpoints were tested using Postman before the integration with the frontend.
  - We imported the database from VPS to our local sandbox.
  - Refined the chatbot UI and flow. (The chatbot now opens from the sidebar)
  - Savings and Budgets API are done in this sprint and integrated with the frontend.
  - Change password and update account information are implemented in this sprint

- What could be improved?
  - The categories API for custom categories is done, but it has an issue with integration to the frontend.
  - The global loading bar is repetitive in chatbot and can be removed since the chatbot has an existing loading indicator.
  - Refine the authentication page because of the unresponsiveness in other devices.

- What needs to be done?
  - Complete the **budget** and **savings transaction** API Endpoints next sprint.
  - Complete the features required for transactions, savings, and budget next sprint.
  - Focus on implementation of notifications and reports on the following sprints.
