+ New sub-item							
Categories Endpoint for Reports API	Arroyo John Matthew			December 12, 2025		Next Sprint	High

Sprint Description:

This sprint prioritizes the finalization of the web application's core functionalities. This includes the completion of the savings and budgets feature, as well as the transaction history display. Furthermore, the sprint emphasizes enhancing user experience through the implementation of confirmation modals and snackbars for the creation, editing, and deletion functionalities within the application.

Sprint Retrospective:

- What went well?
  - The team was cooperative and tasks were almost complete before the deadline.
  - Improved the user experience by adding snackbars and modals in the savings and budgets page.
  - We completed the **savings** and **budgets** transactions API this sprint and integrated it with the frontend.
  - **Reports** API and frontend integration were also completed in this sprint.
  - **Notifications** feature is initially done:
    - Saving deadline reminder (7 days, 3 days and 1 day before the date)
    - *To be followed:*
      - *Budgets that are about to run out*
      - *Completed Savings*
      - *Savings Milestone*

- What could be improved?
  - Some pages need to be styled and uniformed to display a better user interface.
  - Improve the responsiveness of the web app.
  - Budgets:
    - Dynamic data in Budget Transaction

- What needs to be done?
  - Prioritize the remaining core features of the application:
    - Categories:
      - Add category frontend form for custom categories
    - Dashboard refinement - make it like an onboarding to the web app.
  - Review and update the iBudget documents.
