

# Rescue Hub

## [Problem Statement]

Many people struggle with knowing who to contact in times of emergency. The lack of clear, accessible, and reliable emergency hotlines often causes delays in getting help when it's most needed. This might cause some unprecedented outcomes, so having a reliable and very intuitive one stop platform for all help and emergency needs is quite necessary.

## [Objectives]

**The Objectives of the Rescue Hub are:**

- Reduce the time spent searching for emergency contacts.
- Provide a centralized directory of emergency contacts within the app for quick access.
- Make emergency contact information accessible and easy to find.
- Enable users to share survival experiences, tips, and practical advice with the community.
- Have a helping user community base that easily will lend a helping hand to anyone.

## [Proposed Solution]

**Rescue Hub** is a web application that helps communities access emergency hotlines quickly. It centralizes important numbers—such as hospitals, fire stations, and disaster response units—for faster assistance. It also helps emergency responders on what to look out for and where to go for the nearest help.

The app also allows users to share advice and survival experiences, providing helpful insights to others who may face similar situations.
