Setup Webhook	J James Michael Mejares		November 21, 2025		Done

### Sprint Description:

This sprint focuses on deploying our web application project to Hostinger Virtual Private Server.

### Sprint Retrospective:

- What went well?
  - The team successfully deployed our web app to Hostinger VPS.
  - The project's CI/CD is completed using GitHub Actions Workflow and using a shell script.
  - The user's username is already reflected through the dashboard.
  - The project's current database is uploaded to Hostinger VPS and accessible through MySQL Workbench remotely.
  - Email Verification is refined and is now dynamically accepting emails other than [@gmail.com](mailto:@gmail.com)
  - Refined our landing page for a better user experience.
  - Savings Dashboard is implemented and stores data temporarily in the frontend.
  - The frontend and backend are still in development and can still be changed with suggestions or improvements.
- What could be improved?
  - The team was having a difficult time setting up the transactions API and integrating it with the frontend, but there was progress.
  - There was a conflict connecting our database to our SpringBoot backend, but it is fixed and working in this sprint.
  - **Deployment:** Our tester debugs faced difficulties because of the conflicts in the script, but it has also been fixed in this sprint.
- What needs to be done?
  - The team changed its color scheme for the UI, and is expected to finish on the next or following sprints.
  - **API Endpoints:** Expand API Implementation next sprint.

- Continuous testing of frontend and backend through workflows and reviews.
